

Blindside® Herbicide

Control for Broadleaf Weeds in Warm Season Turf

“We’ve struggled with doveweed for a while now, and other products labeled for it don’t do much. But we’ve had tremendous success with Blindside on doveweed with no damage issues in the summer months.”

-Denise Wartan

Jacksonville, FL

WHAT IS BLINDSIDE HERBICIDE?

Dual-action Blindside herbicide works through both foliar contact and root uptake to deliver faster control of over 70 broadleaf weeds and sedges, including resilient species like dollarweed, doveweed and Virginia buttonweed. In fact, Blindside is proven to deliver visible signs of control within just one week, making it significantly faster than current competitive solutions.

HOW DOES BLINDSIDE HERBICIDE WORK?

Blindside herbicide works at the soil surface to prevent reproductive structures like Yellow Nutsedge tubers from developing. With this extended soil activity, you'll notice a significant reduction in future populations of weeds next season, saving you time and money.

BLINDSIDE HERBICIDE:

- Highly effective solution for challenging postemergence weeds
- Can be applied to virtually all types of warm-season turfgrass- even St. Augustinegrass

WEEDS CONTROLLED

- Doveweed
- Wild Violet
- Ground Ivy
- Yellow Nutsedge
- Virginia Buttonweed

LABELED USE SITES:

- Residential Lawns
- Institutional Lawns
- Athletic Fields
- Commercial Sod Farms
- Golf Courses (Fairways & Roughs)

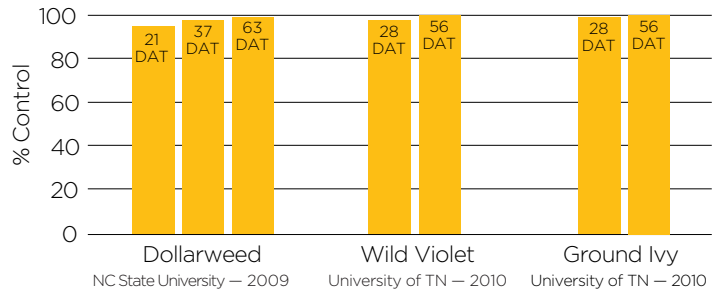

GENERAL USE NOTES

Blindside® Herbicide is formulated as a WDG (Water Dispersible Granule) containing 0.66 lb of active ingredient per pound of product. Blindside is absorbed by shoots, foliage and roots. A post emergent application of Blindside Herbicide is improved when adequate soil moisture is present at application. Best weed control results will be obtained when no rainfall or irrigation occurs within 24 hours after application.

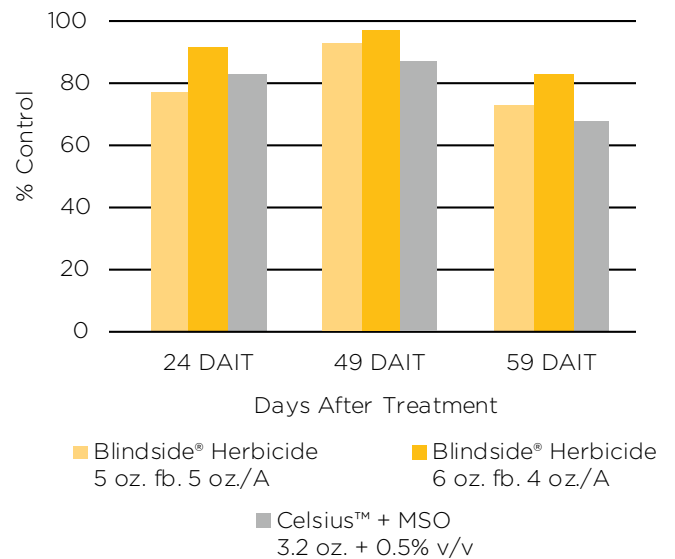

APPLICATION GUIDELINES:

- For Use with Power Sprayers: Uniform and accurate spray coverage requires proper calibration, agitation and operation of spray equipment. The use of marker dyes or foams can improve application accuracy. Boom sprayers equipped with appropriate flat fan nozzles, tips and screens.
- For Use with Hand Operated Sprayers: Backpack and compression sprayers are appropriate for small turfgrass areas and spot treatments. Wands fitted with a flat fan nozzle tip should be held stationary at the proper height during application.
- Apply this product in a sufficient volume of carrier solution to provide a uniform spray distribution.
- Apply the higher spray volumes for dense weed populations.

EFFICACY AGAINST TARGET WEEDS

VIRGINIA BUTTONWEED CONTROL
